This proposal describes a 3-year training program for the development of an academic career in the molecular mechanisms of cell division. The long-term objective of the applicant is to understand the regulatory mechanisms that control the initiation and progression of cell division. The immediate objectives of this program are to 1) acquire expertise in the genetic analysis of cell division; and 2) develop advanced techniques for genetic analysis of cell division in the fission yeast *Schizosaccharomyces pombe*. Genetic analysis of cell division is the predominant approach used to determine the molecular function of a particular gene. The fission yeast *S. pombe* has served as a model system for genetic analysis of cell division for many years, and has proven to be particularly useful for investigating the regulation of spindle pole body (SPB) assembly and chromosome segregation. The development of a more in-depth understanding of SPB function and its regulation is a crucial first step in understanding how SPB assembly contributes to the overall regulation of cell division. A better understanding of the mechanisms that control SPB assembly will enhance our understanding of the function of other spindle pole components and the regulation of mitosis. This proposal will utilize existing mutant collections as well as newly isolated strains to investigate two classes of genes that control SPB assembly, and

determine the function of two new genes identified in an SPB screen. The overall goal of the research is to develop new methods for screening for regulators of cell division.

Q: How to prevent Joomla from storing the cache after editing a file I have a development server with Joomla 3.4.6 and Cloudflare cache. I'm developing a component that creates an image thumbnails for the articles and I need to be sure that every time I save a new file, it won't be cached. So, when the file is updated, it will be deleted from the cache. I noticed that when I'm editing the images, after saving, the cache will be cleared, but after that, if I make a modification, that image will be saved again and the cache will be back to normal
