What's New in the AutoCAD?

Invented by Autodesk Developer Kenneth Butler, the Industry Productivity Standards (IPS) and Markup Assist functions are new features in AutoCAD 2023. The new features are part of a larger overhaul in the way users create and edit drawings. Version 2023 includes an updated JavaScript, a new JavaScript Library and Microsoft Edge support for the first time. The new JavaScript updates the way AutoCAD interacts with JavaScript-based technologies, such as WebGL, HTML5, and add-on content and libraries, such as the Autodesk Exchange Libraries. Keep reading to learn more about these AutoCAD 2023 features and watch the video to see them in action. Markup Import You can import drawings created by other designers, and incorporate their feedback directly into the drawing you're working on. You can even edit the comments inline in the drawing, making the incorporated content instantly visible to the other designer. With the Markup Import function, you can import and review comments that have been entered by other designers into a drawing. The Import Comment dialog box opens and prompts you to specify a drawing. You can import comments from any of the following: Online drawings hosted on Autodesk's cloud-based online drawing service, including drawings stored in your cloud locker Paper drawings or PDFs that are stored locally Any of the above that are stored in a Windows computer as bitmap files (BMP, GIF, JPEG, or PNG) The online storage and paper formats are used when you connect to the cloud-based service from your local computer. You can download drawings from online drawings in the cloud to your local hard drive and then import them locally using the Markup Import function. Once you import a comment, you can view it in the Comments list, and open the drawing file where the comment was entered. The Comments list displays all the comments you've imported. In the Comments list, you can edit the comment as you would any other text entry in the drawing. Changes to the text can then be incorporated automatically into the drawing. You can save any changes that you make to the comment, and incorporate them back into the drawing. You can also delete a comment. The existing comments in the drawing automatically stay there after you import the comments. Markup Import now supports direct printing of comments and the Direct Markup option. Draw
